Business Backup + Cloud Recover from Eatel

Business is a fully-staged and tested virtual disaster recovery (VDR) solution. It features centralized management of protected systems via web-based Bare Metal Restore (BMR) plug-in for Windows servers. DR-grade online backup with data restores via mobile vault, LAN, or local vaults.

How it Works

- BMR plug-in available to restore physical/virtual servers to Eatel's cloud.
- Automated data backup in Eatel owned and operated, enterprise-grade data centers
- Centralized management of protected systems via web-based portal
- Data encryption in transit and at rest
- Data compression on client side for the most efficient storage footprint
- Lightweight agent deployment that won't interfere with normal server operations
- DeltaPro technology allows for incremental backups after the initial full-scale backup

How can Business Backup + Cloud Recover work for me?

- Protects Operating System files, Active Directory, and open files and applications such as databases and other structured data types
- Meets compliance regulations for HIPAA, FINRA, Sarbanes-Oxley, & more
- Access to Eatel's cloud-based, virtualized disaster recovery platform
- Local seeding options available to reduce data transport time to an Eatel data center
- Large data stores recovered in 4-12 hours, with simple restores taking only a few moments
