

BACKUP AND RECOVERY DONE RIGHT

The scalable data backup and recovery solution for your business.

BackupPro, powered by Veeam

BackupPro, powered by Veeam®, is a software-only solution that directly integrates with VMware vSphere® and Hyper-V® to allow for image-level, virtual machine backups. Backup data can be stored locally on your infrastructure or off-site in the cloud. Depending on your recovery needs, this solution can be deployed as a software-only solution or deployed on dedicated storage hardware. Business BackupPro powered by Veeam scales easily as your business grows.

How can BackupPro powered by Veeam work for me?

- Scales with your business
- Rapid recovery of the data you want, in the form you want it, with RTOs of less than 15 minutes
- Storage-agnostic means you can use whatever mix of production and backup storage best meets business needs
- Features robust deduplication, compression, and encryption
- Option to backup and archive directly to the cloud or to a local, on premise storage repository
- Recover entire VM Guest via VMDK snapshot backups
- Granular recovery of individual emails, records, or objects from any virtualized application or file system
- Power-on from a backup job in a live or sandbox scenario
- Integrates directly with VMware vSphere, Microsoft System Center VMM, and standalone Hyper-V hosts
- Perfect solution for businesses with under 300 virtual machines
