

EATEL offers a simple backup and disaster recovery solution at an affordable price! EATEL's NAS Recover for Small Business lets you "set it and forget it," scheduling automatic backups for your business-critical files to a Network-Attached Storage (NAS) device, and automatic archiving to the Cloud.

Network Attached Storage

Backing up your files to an on-premises NAS device means free and fast file recovery in the event of a failure. The option to push an archive to the Cloud means extra peace of mind for your business should an unforeseeable disaster occur.

Don't leave your business up to chance; protect your important data assets with EATEL's NAS Recover.

What's Included

- 1 TB hard drive NAS device, installed and setup on customer's network by EATEL technician
- "Set it and forget it" automatic backup for your critical data
- Optional setup for automatic archiving out to cloud (per customer request)
- Restore files directly from the device or from the cloud*
- Reliable EATEL customer support

Product Description

- Centralize file storage and backup of valuable data with excellent performance
- Synchronize files between the NAS, computers, laptops, and mobile devices
- Connect to the cloud to create a backup archive for added security
- Energy-efficient and easy to use

Backing up and Archiving Data with NAS Recover Device

For performance and security control, using local network storage is the best choice. But for data that is infrequently accessed (cold data), offloading it to public cloud storage can largely reduce your storage management efforts and minimize costs.

With NAS Recover, you now have a simple and affordable disaster recovery plan, as well as a worry-free data archival solution for preserving your business assets.

*Free cloud restore up to 25GB/month
